- # Problem Definition & Innovation Opportunity

Problem Statement :

Government grievance portals receive thousands of complaints daily related to roads, water supply, electricity, sanitation, drainage, and other public services. Most complaints are manually reviewed and routed, leading to delays,incorrect department assignment, duplicate complaints, and slow grievance resolution.

Current Challenges

- Manual complaint sorting.
- Wrong department assignment.
- Delayed grievance resolution.
- Difficulty processing multilingual complaints.
- Lack of priority identification for emergencies.

Innovation Opportunity

Artificial Intelligence can automate complaint understanding, multilingual processing, department classification, priority prediction, and intelligent route making grievance management faster, more accurate, and scalable.

- **Next-Gen Solution & Technical Approach**

Proposed Solution – CivicAI :

CivicAI is an AI-powered platform that automatically understands citizen complaints, classifies them into the correct department, prioritizes urgent cases, and routes them to the responsible authority in real time.

Key Features :

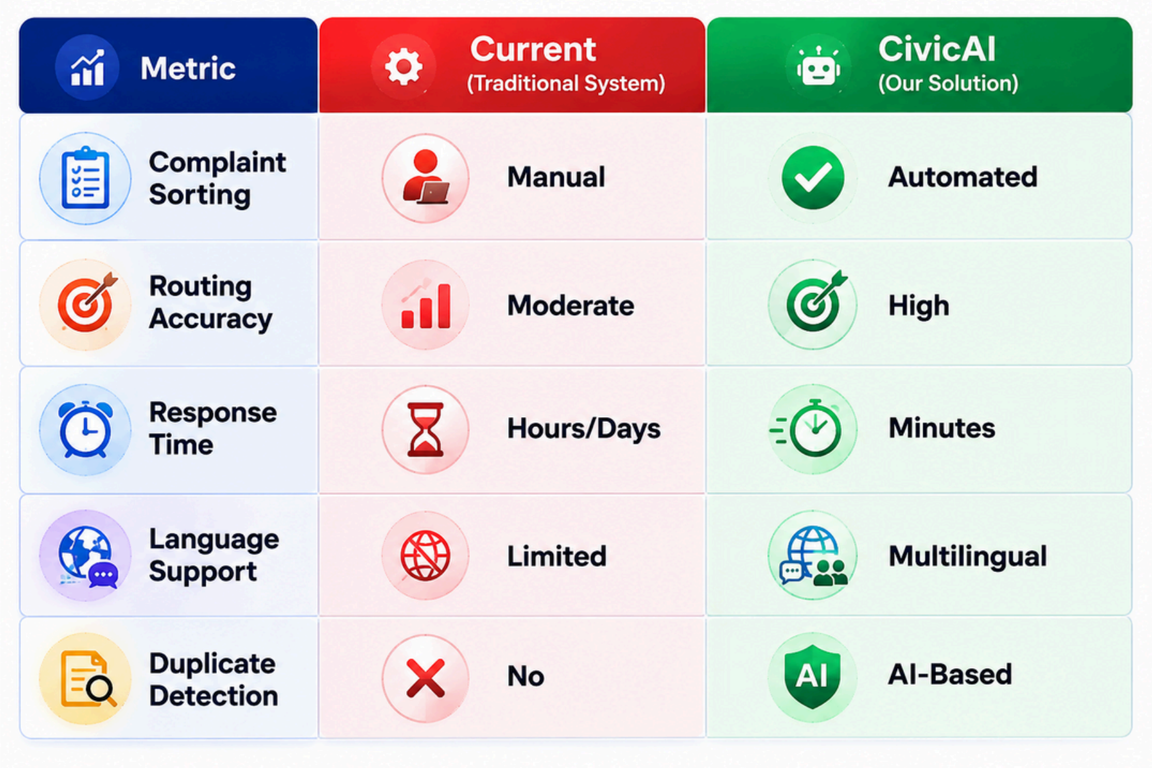

- AI-based complaint classification.
- Multilingual complaint processing.
- Intelligent department routing.
- Priority prediction.
- Duplicate complaint detection.
- Officer analytics dashboard.
- Secure role-based access.

Technology Stack :

Layer	Technology
Frontend	React.js
Backend	FastAPI
AI	BERT / IndicBERT
Database	PostgreSQL
Deployment	Docker + Cloud

- **Impact & Technical Feasibility**

  - **Expected Impact :**

Metric	Current (Traditional System)	CivicAI (Our Solution)
Complaint Sorting	Manual	Automated
Routing Accuracy	Moderate	High
Response Time	Hours/Days	Minutes
Language Support	Limited	Multilingual
Duplicate Detection	No	AI-Based

  - **Technical Feasibility :**

    - Built using mature AI models and open-source technologies.
    - Cloud-ready and scalable architecture.
    - API-based integration with existing government portals.
    - Modular design for phased implementation.

- **Implementation & Scaling Strategy**

Scalability :

Can be deployed across:

- Municipal Corporations.
- Smart Cities.
- State Governments.
- National Grievance Portals.
- Healthcare.
- Education.
- Public Utilities.

- **Conclusion & Future Vision**

Conclusion :

CivicAI is an AI-powered intelligent grievance management platform designed to transform how governments process and resolve citizen complaints. By leveraging Natural Language Processing (NLP), Machine Learning, and multilingual AI, the platform automates complaint classification, prioritization, and department routing, significantly reducing manual effort and improving response times.

Future Vision :

Voice-Based Complaint Registration

- Citizens can submit complaints through speech in regional languages.

Intelligent Chatbot Assistant

- Guide citizens through complaint registration, answer FAQs, and provide real-time complaint status

GIS-Based Smart Complaint Mapping

- Visualize complaint hotspots on interactive maps to help authorities identify recurring issues and allocate resources effectively.

Thank You,

Team Kalki Catalysts.
